⚡ Quick Fix Reference Card

🔴 THE PROBLEM

```
Frontend is trying to connect to: https://workigom.onrender.com/api
Backend is actually at:           https://workigom-backend.onrender.com/api
                                                    ^^^^^^^^
                                          Missing "-backend"!
```

✅ THE FIX

Change This:

```
VITE_BACKEND_URL=https://workigom.onrender.com
```

To This:

```
VITE_BACKEND_URL=https://workigom-backend.onrender.com
                          ^^^^^^^^
                     Add "-backend"
```

🎯 WHERE TO CHANGE IT

Method 1: Vercel Dashboard (RECOMMENDED) ⭐

Steps:
1. Go to: https://vercel.com/dashboard
2. Click: **workigom** project
3. Click: **Settings → Environment Variables**
4. Edit: `VITE_BACKEND_URL`
5. Set to: `https://workigom-backend.onrender.com`
6. Click: **Save**
7. Go to: **Deployments**
8. Click: **Redeploy**
9. ✅ **Done!**

Time: 5 minutes

Method 2: Update Code

File: `/home/ubuntu/workigom/src-frontend/.env.production`

Current content:

```
# Production environment variables
# Note: In Vercel, set VITE_BACKEND_URL in the dashboard under Settings > Environment
Variables
VITE_BACKEND_URL=https://workigom.onrender.com
```

Change to:

```
# Production environment variables
# Note: In Vercel, set VITE_BACKEND_URL in the dashboard under Settings > Environment
Variables
VITE_BACKEND_URL=https://workigom-backend.onrender.com
```

Then commit and push:

```
cd /home/ubuntu/workigom
git add src-frontend/.env.production
git commit -m "fix: Correct backend URL to include -backend"
git push origin master
```

Time: 2 minutes + auto-deploy

🔍 HOW TO VERIFY IT'S FIXED

Test 1: Check Console

Open https://workigom.vercel.app and check console (F12):

Should see:

```
🔧 API Configuration: {
  VITE_BACKEND_URL: "https://workigom-backend.onrender.com",
  finalApiUrl: "https://workigom-backend.onrender.com/api",
  mode: "production"
}
```

Test 2: Check Network Tab

Open Network tab (F12), use the app:

Should see:
- ✅ Requests to `workigom-backend.onrender.com`
- ✅ Status: 200 OK
- ✅ No ERR_NETWORK errors

Test 3: Backend Health Check

Visit: https://workigom-backend.onrender.com/api/health

Should return:

```
{
  "success": true,
  "message": "Workigom API is running",
  "database": "connected"
}
```

📊 COMPARISON TABLE

Item	Wrong (Current)	Correct (Fix)
Env Variable	`workigom.onrender.com`	`workigom-backend.onrender.com`
API URL Called	`workigom.onrender.com/api`	`workigom-backend.onrender.com/api`
Result	❌ ERR_NETWORK	✅ Success (200 OK)
App Status	❌ Broken	✅ Working

🚨 TROUBLESHOOTING

Still seeing errors?

1. **Hard refresh:** Ctrl+Shift+R (or Cmd+Shift+R)
2. **Clear cache:** Ctrl+Shift+Delete
3. **Check env var** in Vercel Dashboard
4. **Wait for redeploy** to complete (1-2 mins)
5. **Check deployment logs** for build errors

Backend not responding?

Test directly:

```
curl https://workigom-backend.onrender.com/api/health
```

Should return JSON with `"success": true`

📱 COPY-PASTE VALUES

For Vercel Dashboard:

```
Name:  VITE_BACKEND_URL
Value: https://workigom-backend.onrender.com
```

For .env.production file:

```
VITE_BACKEND_URL=https://workigom-backend.onrender.com
```

✅ CHECKLIST

Before fix:
- [ ] Confirmed backend is at https://workigom-backend.onrender.com
- [ ] Confirmed env var currently has wrong value
- [ ] Confirmed frontend deployment is at https://workigom.vercel.app

After fix:
- [ ] Updated environment variable
- [ ] Redeployed application
- [ ] Tested in browser console
- [ ] Verified API calls work
- [ ] Confirmed no ERR_NETWORK errors
- [ ] All app features working

🎉 SUCCESS!

When you see this, you're done:

```
✅ No console errors
✅ API calls succeeding (200 OK)
✅ Jobs loading correctly
✅ Login working
✅ All features operational
```
